

Combat suspenders added to line of essential gear

Spec-Ops. Brand introduces Combat Suspenders to its line of pioneering tactical nylon gear. The new suspenders are a side-mount attachment system that redistributes the load so the pants belt isn't supporting all the weight of belt-mounted gear.

Do you have a new product you would like featured in *EMPN*? E-mail press releases for consideration for publication to nancy.perry@cygnusb2b.com.

Easy-access side-release buckle fits belts of any size and makes it easy to disconnect the suspenders from the belt, even when worn under body armor. One-size-fits-all with a unique adjustment system that provides a custom fit.

Glowing fabric sensation

The **Specialty Group** is making fabrics "glow in the dark" with a new product titled "energlo," which glows for over three hours in total darkness after only 12 minutes of exposure to natural light. The technology involves the use of completely safe photoluminescent (light absorbing & emitting) crystals that are dispersed within several layers of the company's waterproof, breathable coatings and then applied to a variety of fabrics that will ultimately be used for wet-weather clothing where additional nighttime visibility is required.
